Understanding Top, Middle, and Base Notes

Top Notes: The initial impression — light, fresh, and fleeting. Think citrus, herbs, and light fruits.

Middle Notes: The heart of your scent, unfolding after the top notes evaporate. Floral, spicy, or fruity tones live here.

Base Notes: The deep, lasting foundation that anchors the fragrance — woods, musk, amber, vanilla.

A well-balanced perfume unfolds like a story — beginning with a bright introduction, evolving into a complex middle, and lingering with a memorable finish.

Perfume Blending Techniques

- **Start Small:** Use pipettes and sample vials — begin with tiny drops of essential oils.
- **Build Your Layers:** Add top notes first, then middle, then base — experiment with ratios.
- **Let It Rest:** Allow blends to mature for at least 48 hours — scents meld and develop complexity.
- **Test on Skin:** Perfume reacts uniquely with individual skin chemistry — always try before finalizing.
- **Keep Notes:** Meticulously record your formulas for easy recreation and tweaks.

Find Your Scent Personality: Quiz

Answer these questions to discover your aromatic profile:
